# CP-725

## Chlorinated Alkaline Detergent

#### DESCRIPTION

CP-725 is a high performance, chlorinated alkaline spraywash formulated for the pharmaceutical, biotechnology, cosmetic and food and beverage industries and life science research. It is alkaline and contains 2% chlorine as hypochlorite for effectively removing a wide range of process and product residues including proteins, synthetic organics, and oils. When used as directed, CP-725 is safe for use on glass, stainless steels, and a wide variety of plastics. This product is an excellent Clean-In-Place (CIP) and recirculating spraywash product at 0.5% to 5% (v/v) use dilution as it is low foaming at all temperatures and will not cavitate recirculation pumps.

Free rinsing CP-725 provides clean, residue free surfaces. Organic water conditioners provide excellent hard water tolerance that eliminates mineral deposits. This cleaning agent is phosphate free.

#### DIRECTIONS

CP-725 is designed for use in recirculating spray or immersion wash applications and is ideal for glassware and bottle washers, parts washers and CIP systems. Typical operating concentrations of CP-725 vary from 0.5% to 5% (v/v) depending on temperatures, soil loads, and cleaning methods used. The product can be fed with standard pumps and metering devices.

Proper care and protective equipment are required for handling the concentrate and in manual cleaning-see the MSD sheet.

Contact CANI, Inc. for technical services or product recommendations.

#### PRODUCT SPECIFICATIONS

Form: liquid  
Odor: mild chlorine  
pH1% solution: 11.8 - 12.2  
Specific Gravity: 1.145 - 1.170  
Water Solubility: complete  
Foam: low

**For Use On:**  
Pharmaceutical Equipment  
Biotechnology Equipment  
Cosmetic Equipment  
Glassware and Labware  
Plastics  
Stainless steel
